BY MISS SHERINA BALARATNAM

Contemporary medical aesthetics covers a broad range of advanced treatments designed for the face and body to deliver you optimal results with little or no downtime. If you are considering an aesthetic treatment, this can be an overwhelming experience with such an array of possible treatment and options.

According to the British Association of Aesthetic Plastic Surgeons (BAAPS), 'tweaked, not tucked' appears to have become the new aesthetic ideal with patients seeking more subtle, understated cosmetic procedures with minimal downtime. The aim is for a more refreshed look rather than looking 'done'. My patients generally tell me that all they want is to look the best that they can for their age, and more importantly, to look like themselves, just better. Our advanced non-surgical treatments portfolio includes cosmeceutical skincare, innovative technology and the occasional and subtle use of cosmetic injectables.

"I truly believe a detailed consultation is essential in understanding your needs. It is important to have a thorough clinical assessment of skin and facial structure and balance in order to understand the steps required to obtain optimal results. My goal is to help my patients achieve and enjoy natural-looking results."

MISS SHERINA BALARATNAM
MBBS, MRCS, MSC (UCL)
MEDICAL DIRECTOR OF S-THETICS

After a detailed consultation and facial assessment using the latest VISIA skin imaging system, we will formulate a customised treatment plan for you with

the aim of delivering safe and effective results.

We ensure you have a maintenance program set in place and will regularly review your results with you to ensure you achieve the outcome you desire.

My patients are also becoming increasingly aware of how their skin changes both through the seasons and with their lifestyle. S-Thetics have been selected as one of the first 5 clinics in the UK to offer Universkin, skincare truly personalised to you. Universkin allows us to customise your skincare formulation precisely for your skin using a range of 19 active ingredients.

Treatment techniques, products and energy based devices are becoming ever more

ACHIEVE YOUR AESTHETIC GOALS
with
S-THETICS

sophisticated, with minimal downtime and optimal results. Many of my patients presume that cosmetic injectables may be their only option. However I frequently advise a synergy of treatments, for instance skin tightening combined with facial treatments to maximize your results all with a "needle free" approach to achieving your goals.

Your face and skin are unique so we always adopt an equally unique approach to your treatment plan.

With our medical director Miss Balaratnam's extensive plastic surgical background, these treatments are combined with her deep understanding and knowledge of facial anatomy and facial ageing to help you understand and optimise your ideal skin health.

○ Research your doctor. You should have a detailed consultation, facial assessment and a well-explained treatment plan that you understand

○ A VISIA skin analysis will give you a deeper understanding of your existing skin health and is a starting point for all our patients

○ Invest in your skin health and have regular treatments – just like

a monthly gym membership

○ Personalised and precise skincare formulations adapted for your individual skin requirements*

Miss Balaratnam holds the prestigious title of "Local Country Ambassador" (LCA) for Allergan, the manufacturers of BOTOX® and the Juvederm® range of dermal fillers. As one of only a handful of expert UK Doctors selected as an LCA, she regularly trains and mentors other health care professionals in advanced injectable techniques and treatment strategies.

We would like to invite all Stoke Park readers to have a complimentary VISIA skin analysis and consultation. Please quote 'Stoke Park' when booking.
